

VARICOCELE CASE

Presenting Complaint

22 year old male presenting with painful lump in left scrotum.

Ultrasound

Confirms dilated veins in the left scrotum and reflux in left testicular vein.

Management

Patient undergoes varicocele embolisation using ONYX (liquid embolic agent) avoiding the need for metal coils. Patient discharged home on the same day.

Follow-up

6 month ultrasound showing no varicocele and no residual lump.

Left Scrotum
